Acknowledgment

When I started to recall all the people whom I appreciate for help me make this thesis realized during the 5 years, the first one came up to my mind is Prof. Jan Teuben. Without his strong support, I would even not be able to stay in the Netherlands so long. From the moment he selected me as a Ph.D candidate in his group, there were so many things inscribed in my memory, research guidance, teaching me how to scientifically analysis and resolve problem, improving my English, helping me on my orientation in the Netherlands. His kind help made me adapt for Dutch cultural much easier and feel warm as home. What I learned from him is far more than chemistry. I was deep influenced by his kindness, intelligence, well organizing and humors. I feel regret I could not finish my thesis before his retirement. However, I will remember him forever as my supervisor, a wise elder and a good friend who I can always rely on.

Prof. Bart Hessen is the second person I would like to acknowledge. This thesis would never been finished without his help. I am grateful to him for the insightful discussion, the strict requirement on the research and the multi-modification of my manuscript. His painstaking was marked on every page of this book. I was so benefited from his broad knowledge and precise attitude on study. I am proud of being guided by him.

I also would like to thank the people in Teuben/Hessen group and Hummelen group, who provided a friendly and enjoyable working environment during my Ph.D study. Within the limitation of the page, I try to name some of them who gave me so much help on my work, Xiaochun Zhang, Marco Bouwkamp, Dirk Beetstra, Sergio Bambirra, Winfried Kretschmer, Patrick Deckers, Timo Sciarone, Shaozhong Ge, Elena Novarino, Victor Quiroga, Cindy Visser, Edwin Otten, Steven Boot, Andries Jekel, Daan van Leusen, Guohua Liu, Aurora Batinas, Thomas Koch, Erica Jellema, Menno Brandsma, Niels Tazelaar, Peter Dijkstra, Bodo Richter, Piet-Jan Sinnema, Coen van de Brom,

Pavel Shutov, Christian Nijhuis, Jan Helmantel, Wolter Beukema, Oetze Staal, Alfred Boonstra, Marten Hettinga, and many persons who have worked in Teuben/Hessen group for a long or short term.

I am also indebted to Dr. Peter Budzelaar (Radboud University Nijmegen, presently at University of Winnipeg) for the DFT calculations, Auke Meetsma for the X-ray structures, Klaas Dijkstra for help on NMR and Joop Vorenkamp for GPC measurement.

Besides chemistry, I got numerous aids from my Chinese friends in Groningen as well. Zhongxiang Zhang, Guoxin Li, Yi Liao, family Li (Miao) and many kind Chinese have lent their hands on me and made my life more pleasurable. I could not mention all their names here but they will be remembered by my heart forever.

In the early period when I just arrived in the Netherlands, I had been helped by many Dutch people in airport, train stations, streets, campus, supermarket, hospital and many places where I have been. Especially my neighbor, Mr. W. Weemhoff (Bill), helped me a lot on the settlement of my family. I would like to thank all of them although I do not know all their names.

Last but not least, I heartily thank my son, Lemeng, and my wife, Jichi, who shared all my happiness and sadness in the years and constantly supported me as much as they could. I could not get through the hard time during my Ph.D study without their love. They are my motivity for all the time.
